

Project: Sinéfolis

Project Description:

Sinéfolis Cinemas, a premium global movie theater chain with advanced technology and luxurious amenities, is launching a new website to enhance its online presence.

As an employee, you need to design and develop a five-page website (Landing, Promo, Now Showing, Cinema, Feedback) that allows customers to explore showtimes, book tickets, and stay informed.

1. The requirements include creating a Figma prototype different from the final website, ensuring an attractive, functional, and responsive design using CSS (five properties), JavaScript, and meta viewport/media queries for mobile (below 768px).
2. Each page must have a header, navigation, content, and footer. Specific content requirements exist for each page, including welcoming banners and cinema/screen counts on the Landing Page, promo details on the Promo Page, movie information and schedules on the Now Showing Page, branch details on the Cinema Page, and a feedback form with five component types and five JavaScript-based validations (no regex) on the Feedback Page.

How to Use:

Requirements:

1. VsCode
 - a. Use extension:
 - i. Live Server by publisher: "Ritwick Dey"
 - ii. Code Runner by publisher: "Jun Han"
2. Web Browser (Chrome, Safari, Firefox, Opera, Edge, etc)
3. Internet Connections
 - a. Because i use font API from google to have a Poppins Font

- b. <https://fonts.googleapis.com/css2?family=Poppins:wght@300;400;500;600;700&display=swap>

Run the Web Application:

1. Go to index.html
2. Right click on that page
3. Click “Open with Live Server”

Project Disclaimer:

1. Some images used in this project are not licensed for commercial use and are intended solely for educational or non-commercial purposes.
2. The sign-up and login pages are mockups and do not include full authentication or backend integration
3. This project is front-end only; no backend or data storage functionality is implemented
4. The logo images used in this website are common assets publicly available online and were not fully custom-designed.

Color Palette:

Earthen Luxe: <https://samanthadigital.com/luxury-color-palettes/>

Page Explanation

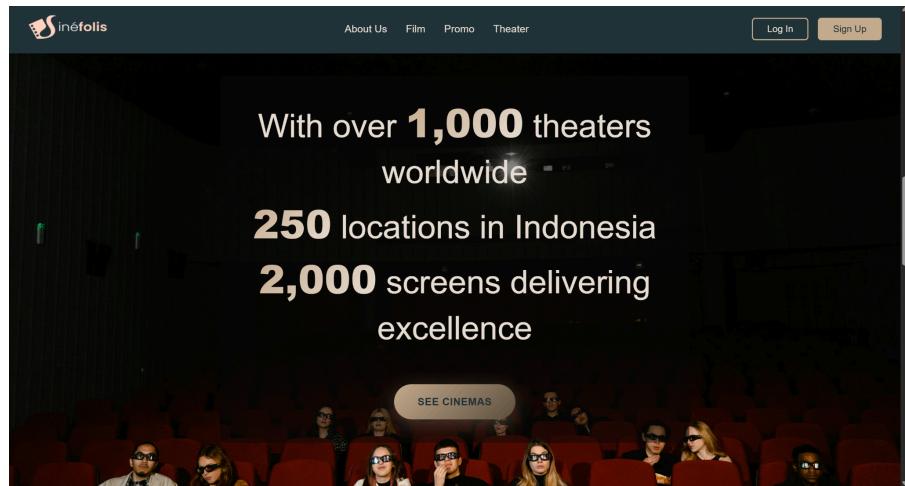

index.html

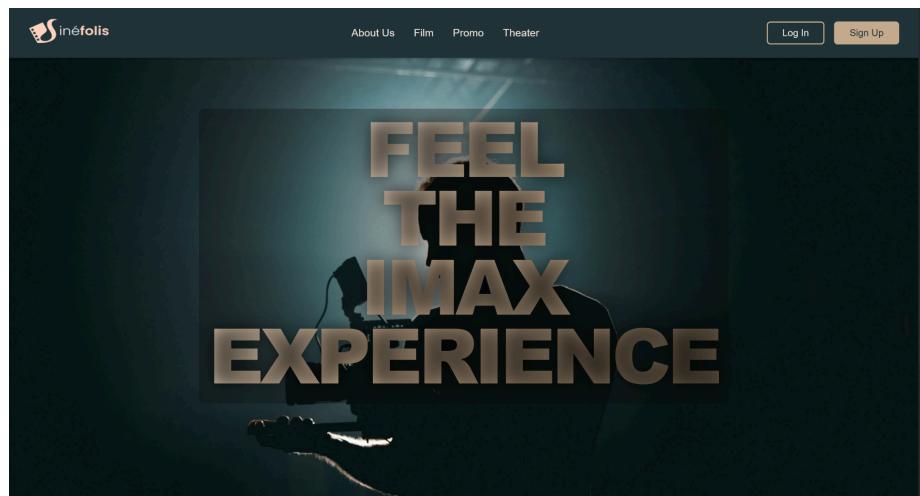

This is where the landing page is at, when the user first time opens the page it will show this landing page with the header. My whole website project will have the same theme color by color palette Earthen Luxe that I mentioned before on the Color Palette section. The background is stars that correlate with our motto “See it Fully ~ Make it your wish. Its also complimented with the background animation of dots that circling around the screen.

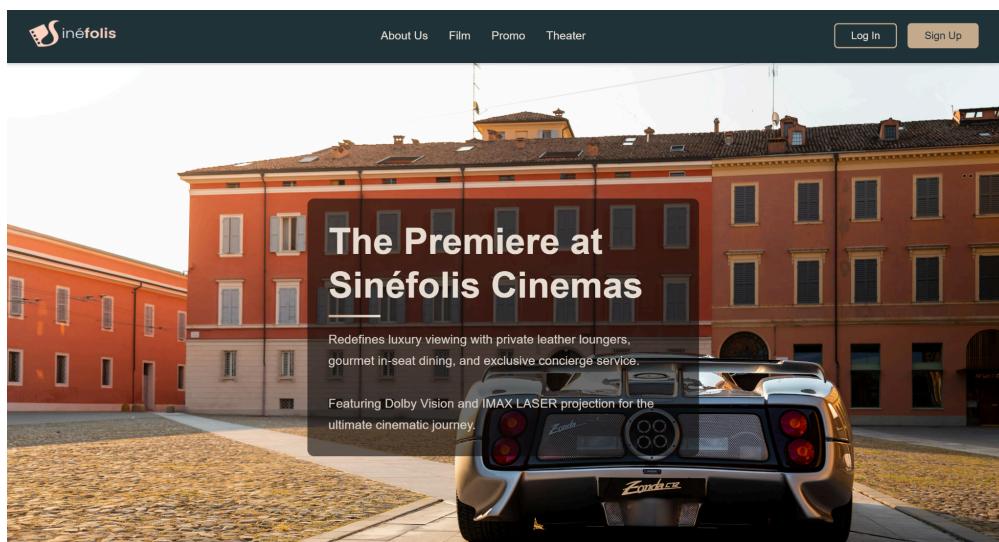

The about us tell the sinefolis company profile.

Show the company world wide ability with a button that will connected to show_cinema.html

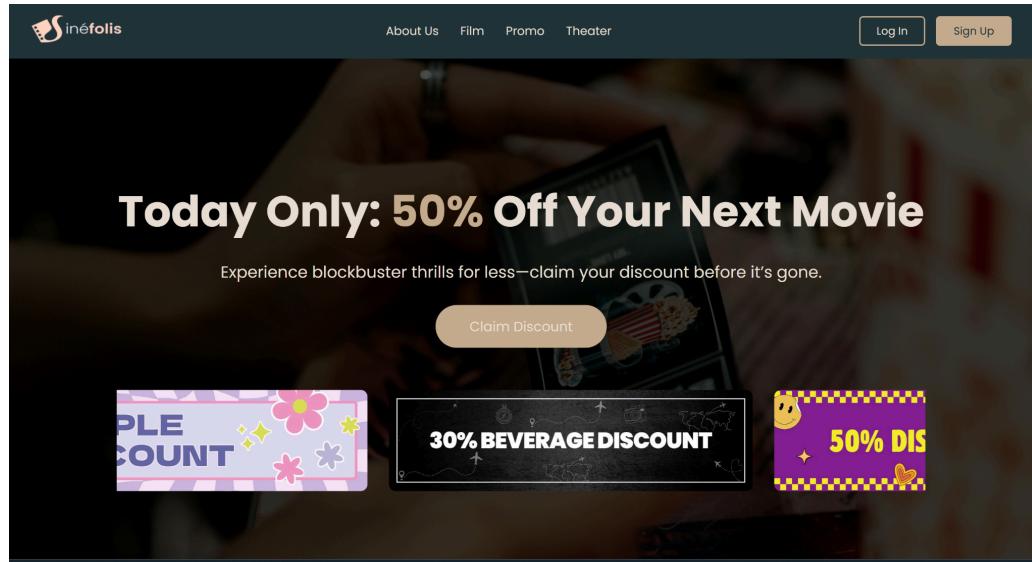

Imax supported cinema

Has a premiere for luxury experience

promo_page.html

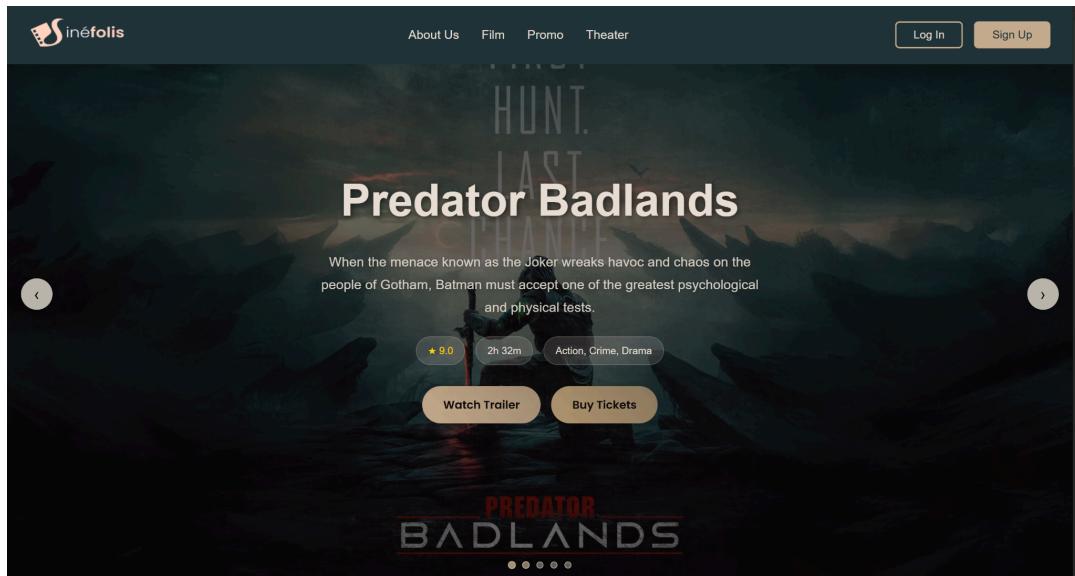

This is the first view a user sees when visiting the Promo page. It displays the best available discount in full-page view, with a brief description and a 'Claim Discount' button. Below that, a discount banner showcases the various other promotional offers available.

The image contains four separate screenshots of the Sinéfolis website, each displaying a different promotional offer:

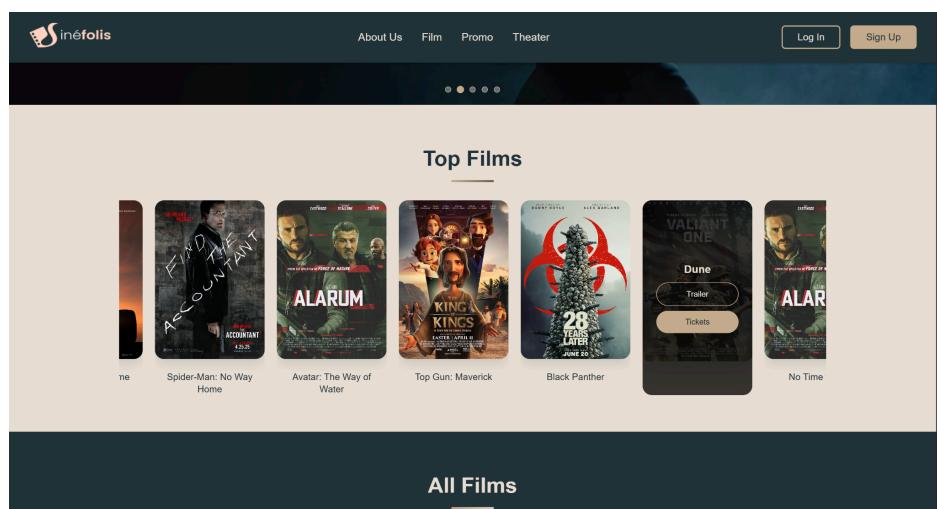

- Blockbuster Bargains on Movie Tickets:** Shows four coupon cards for "Once a Year Coupon" with "35% OFF" and code "GIVEGIVE". One card is marked as "Claimed".
- Enjoy Our Special Combo Coupon:** Shows four coupon cards for "50% OFF" with code "CROPPCODE". Below them are four "SUMMER 34% OFF" cards.
- Snack & Sip Savings:** Shows four coupon cards for "LOVE COUPON" and "SPECIAL BIG SALE".
- Digital Coupons for Cinema Favorites:** Shows four coupon cards for "SPRING Jay" and "DISCOUNT 50% OFF ONLY FOR APRIL".

Scroll, and the user will see the coupon that can be claimed when clicked. This will be also the same for the entire segment

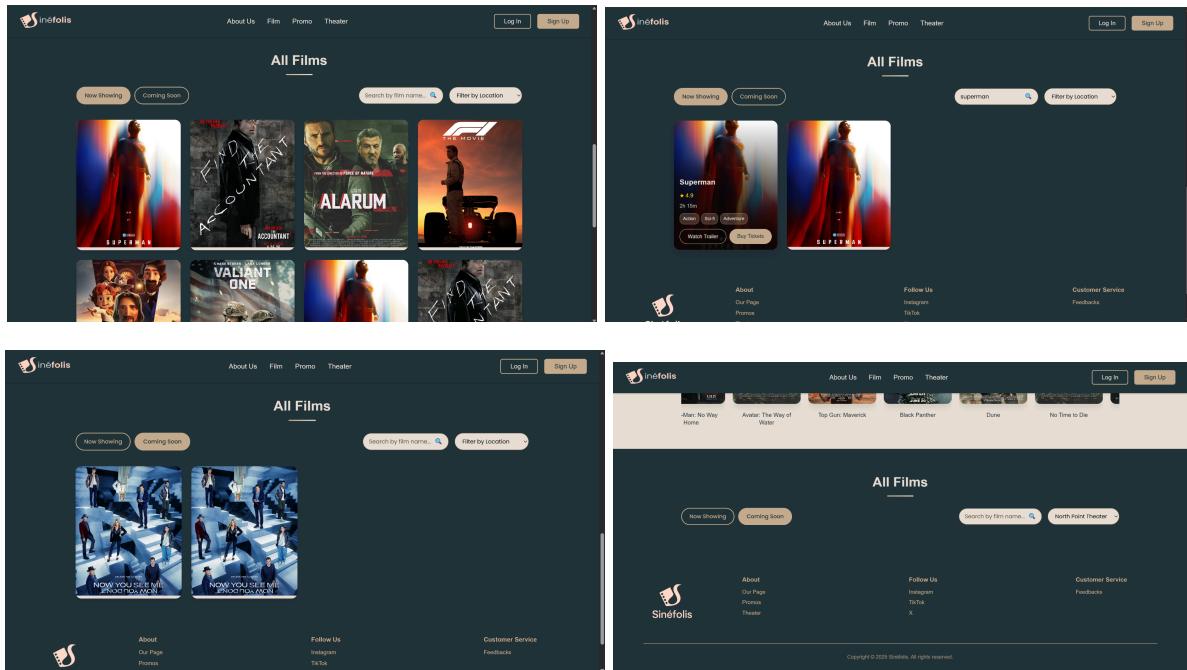

now_showing_page.html

Upon navigating to the now showing page, users will encounter a carousel showcasing the five most popular films currently screening. This carousel features left and right navigation buttons, as well as an automatic scrolling function when inactive. For each film, the carousel displays the title, a brief description, ratings, duration, and genres. Additionally, users can watch the trailer via a YouTube redirect or proceed to the select theater page by clicking the buy tickets button.

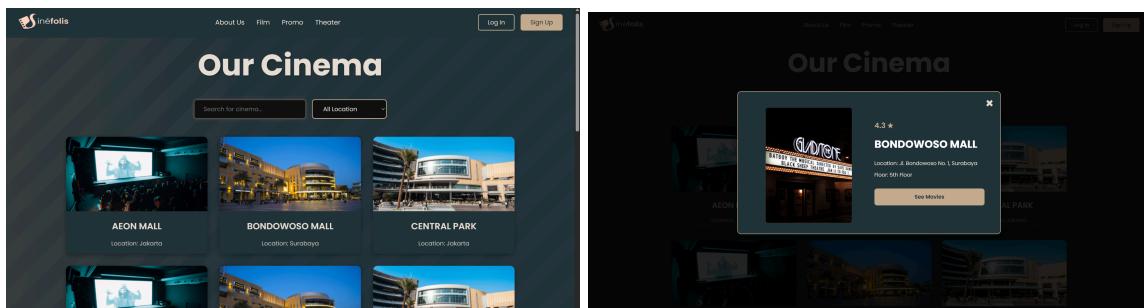

Upon scrolling, users will encounter an automatically updating carousel showcasing popular films specific to their country. This content will dynamically change based on the user's location. Hovering over an item in the carousel will trigger a pause in the scrolling and initiate a hover animation. This animation will display an overlay containing the film's title, a trailer link, and a button for purchasing tickets.

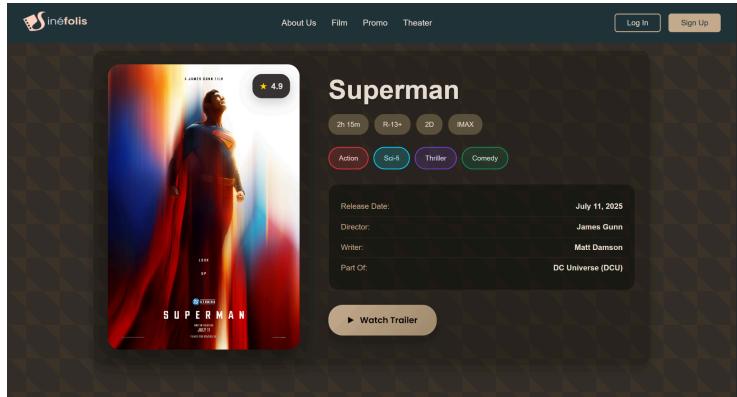

In the final section, users can view all films available in their region. This section includes a filter option to view "Now Showing" or "Coming Soon" movies, as well as a search function. For example, typing "Superman" will display only Superman movie cards. If "Coming Soon" is selected, the interface will show upcoming films. If no films are available based on the selected filter for a specific location, nothing will be displayed.

show_cinema.html

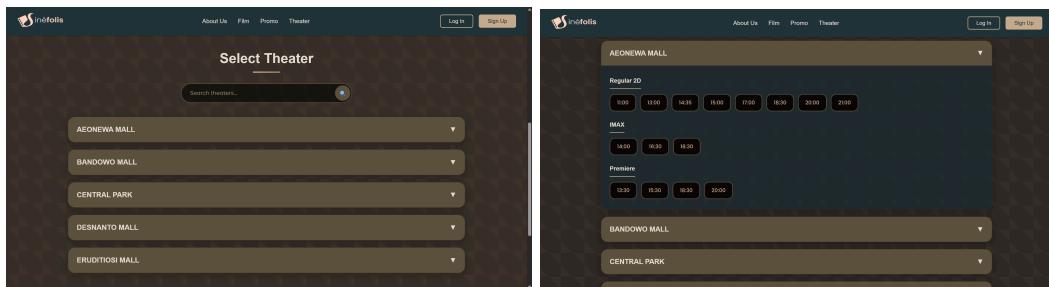

Navigating to the "Theater" section via the navbar will display a page listing all available cinemas. This page includes a search function by name and a filter option by location. Clicking on a cinema will trigger a pop-up window containing: the cinema's picture, rating, location name, address (clickable to open Google Maps), floor number (if applicable), and a "Buy Tickets" button.

select_theater.html

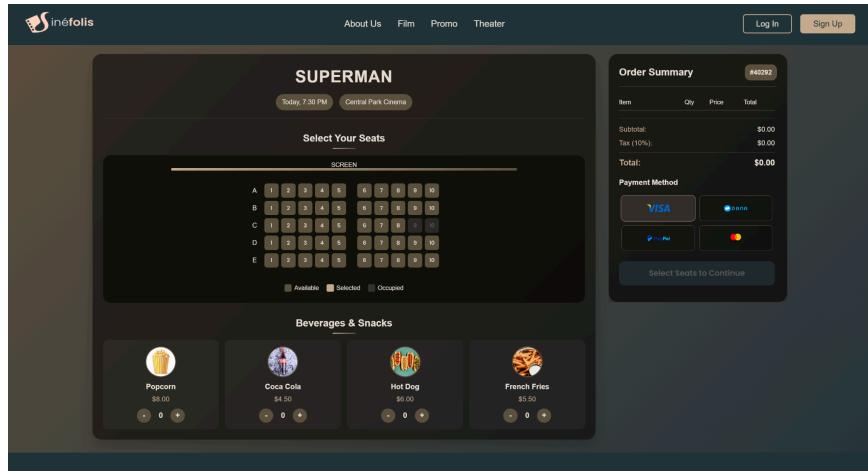

From the current page (now_showing_page.html), if the user clicks "buy tickets," they will be directed to select_theater.html. This page will display the film's title treatment, details, and a "watch trailer" button.

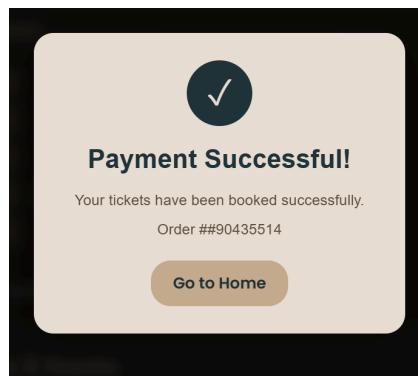

Upon scrolling down, the user will see the available theaters for the selected film. Clicking on a theater will reveal a dropdown menu showing available showtimes at that location, including cinema types such as regular 2D, IMAX, and Premiere.

payment.html

After the user selects their desired time with a "super click," they will be directed to the payment page. Here, they can choose their seats and add beverages and snacks if desired. On the right side, an order summary will display the details of their selections and the total price. This section will also show the available payment methods. Upon successful payment, a confirmation pop-up will appear, and the user will be redirected to index.html.

feedback.html

The feedback page is accessible exclusively via the footer, located within the customer service section. While the footer is a required element, placing the feedback link in the navigation bar is not aesthetically pleasing, so it's better to put it on the footer.

I have **5 main types of form components** being initialized and managed:

- **Text Input Fields:** Used for `fullName`, `email`, and `movieTitle`. These are standard input elements, likely `<input type="text">`, `<input type="email">`.
- **Date Input Field:** Used for `visitDate`. This is likely an `<input type="date">` element.
- **Textarea Fields:** Used for `positiveExperience` and `improvements`.
- **Custom Star Rating System:** Implemented with interactive star icons (`` or similar) that update a hidden input field (e.g., `overallRating`, `serviceRating`).

- **Custom Number Button Rating System:** Implemented with clickable buttons (<button class="rating-btn">) that update a hidden input field (recommendValue).

I implements **6 distinct types of validation logic** for different kinds of input:

1. Name Validation (validateName):
 - Checks if the field is filled (required).
 - Checks for a minimum length (at least 2 characters).
 - Ensures the name contains only letters and spaces.
2. Email Validation (validateEmail):
 - The email uses validation with string manipulation methods like trim(), includes(), indexOf(), lastIndexOf(), substring(), and character-by-character iteration.
 - Checks if the field is filled (required).
 - Checks for the presence and correct placement of the "@" symbol (not at the beginning or end, only one).
 - Checks for the presence and correct placement of "." in the domain part.
 - Validates the top-level domain (TLD) length (at least 2 characters) and content (letters only).
 - Validates domain name characters (letters, numbers, hyphens) and hyphen placement (not at start or end).
 - Checks for spaces and consecutive dots.
3. Date Validation (validateDate):
 - Checks if a date is selected (required).
 - Ensures the selected date is not in the future.
4. Movie Title Validation (validateMovie):
 - Checks if the field is filled (required).
 - Checks for a minimum length (at least 2 characters).
5. Textarea Validation (validateTextarea):
 - Checks if the field is filled (required).
 - Checks for a minimum length (at least 10 characters) to encourage detailed feedback.

6. Rating Validation (validateRatings):

- Ensures that a selection has been made for each star rating component (overall, service).
- Ensures that a selection has been made for the number button recommendation rating.

sign_up.html

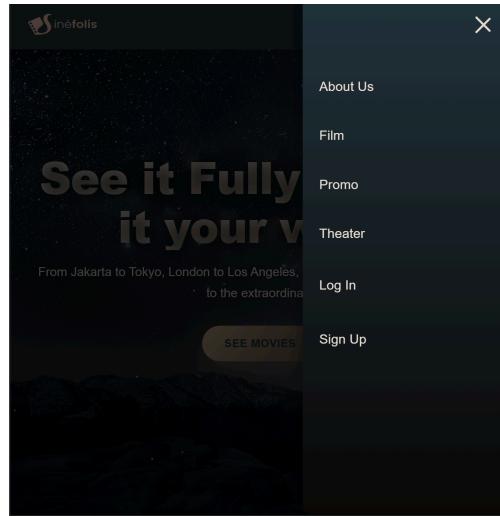

Additional page for sign in user

log_in.html

Additional Page for user log in.

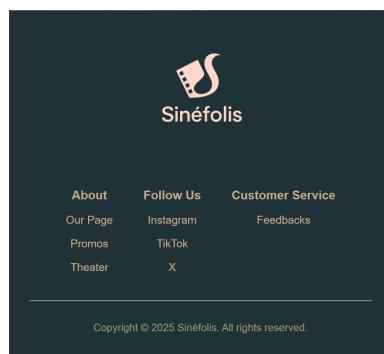

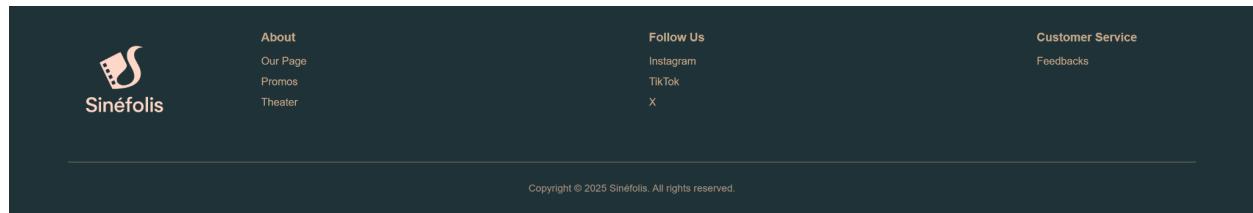

navbar.html (for component)

This navbar structure defines a responsive navigation bar (<header class="navbar">). It includes a logo linking to the homepage, a primary navigation section for desktop view with links to "About Us," "Film," "Promo," and "Theater," and an authentication section with "Log In" and "Sign Up" buttons. For mobile devices, a hamburger icon is present to toggle a separate mobile menu which mirrors the navigation and authentication links, and an overlay is likely used to dim the background when the mobile menu is active.

footer.html(for component)

This HTML footer section is designed for the "Sinefolis" website, featuring a central logo. It's organized into three main columns for navigation: "About" (with links to Our Page,

Promos, Theater), "Follow Us" (linking to Instagram, TikTok, X), and "Customer Service" (with a link for Feedbacks). A horizontal rule separates these columns from the copyright notice, which states "Copyright © 2025 Sinéfolis. All rights reserved." The design is responsive, adapting to narrower screens by stacking these elements vertically while maintaining the same informational content.
